

LOGISTIC PLANNING AND ANALYSIS OF PACKAGING AND UNIT LOADS

The focuses of this competence field are the logistic planning, development and methods of analysis of packaging and unit loads. The increasing volume of goods transport leads to greater importance for the packaging and unit load devices applied in many parts of the economy.

COMPETENCIES

- Logistic planning of packaging
- Planning and development of unit loads
- Using the analysing methods and devices of packaging

SERVICES

- Logistic planning and development of packaging
- Planning and development of unit loads
- Design of optimal units and packages
- Analysing packaging

TOOLS

- Planning software
- Optimisation methods and software
- Analysing machines for packaging

REFERENCES

- Determination of storage capacities for empty pallets (ISI Automotive Hungary Kft.)
- Development of simulation models for the analysis of material flow system variations of motors and their unit loads (AUDI HUNGARIA Zrt.)
